YOURCARS

Android App with sqlite database

Developed at RBIMS

The Car Application is an Android app that allows users to explore multiple car brands, view details, and book test drives in one place.
Admins can manage cars, users, and test drive bookings efficiently.

Introduction

Development (Coding standard)

Development Coding Standards

Android coding standard :

1)Login Credentials

if (checkcredentials)

{

 SharedPreferences.Editor editor = prefs.edit();

 editor.putBoolean(LOGIN_KEY,true);

 editor.putString(USER_EMAIL_KEY,email);

 editor.apply();

 Toast.makeText(LoginActivity.this,"Login Sucessfully!",
 Toast.LENGTH_SHORT).show();

 Intent intent = new Intent(getApplicationContext(),
 DashboardActivity.class);

 startActivity(intent);

 finish();

 }else if (email.equals(ADMIN_USERNAME) &&
 password.equals(ADMIN_PASSWORD)){

 Toast.makeText(LoginActivity.this,"Login Sucessfully!",
 Toast.LENGTH_SHORT).show();

 Intent intent = new Intent(getApplicationContext(),
 FragmentManagmentActivity.class);

2) Perform Logout

private void performLogout() {

 // Clear session data (if you're using SharedPreferences)
 getSharedPreferences("isLoggedIn", MODE_PRIVATE)
 .edit()
 .clear()
 .apply();

 // Redirect to LoginActivity (replace with your login screen class)
 Intent intent = new Intent(this, LoginActivity.class);
 intent.setFlags(Intent.FLAG_ACTIVITY_NEW_TASK |
 Intent.FLAG_ACTIVITY_CLEAR_TASK);
 startActivity(intent);

 // Finish current activity
 finish();
}

private void showLogoutConfirmationDialog() {

 new androidx.appcompat.app.AlertDialog.Builder(this)
 .setTitle("Logout")
 .setMessage("Are you sure you want to log out?")
 .setPositiveButton("Yes", (dialog, which) -> performLogout())
 .setNegativeButton("Cancel", null)
 .show();

}

Development

5) Submit Booking

```
private void submitBooking() {
    String name = etName.getText().toString().trim();
    String email = etEmail.getText().toString().trim();
    String contact = etContact.getText().toString().trim();
    String date = etDate.getText().toString().trim();
    String time = etTime.getText().toString().trim();
    String brand = modelSpinner.getSelectedItem() != null ?
modelSpinner.getSelectedItem().toString() : "";

    if (name.isEmpty() || email.isEmpty() || contact.isEmpty() ||
        date.isEmpty() || time.isEmpty() || brand.isEmpty()) {
        Toast.makeText(this, "Please fill all fields",
Toast.LENGTH_SHORT).show();
        return;
    }

    boolean inserted = dbHelper.insertBooking(name, email, contact, brand,
date, time);
    if (inserted) {
        Toast.makeText(this, "✓ Test Drive Booked Successfully!",
Toast.LENGTH_SHORT).show();
        startActivity(new Intent(this, DashboardActivity.class));
        finish();
    } else {
        Toast.makeText(this, "✗ Booking Failed",
Toast.LENGTH_SHORT).show();
    }
}
```

❖ YOUR APP'S CONCLUSION

1. Project Summary:

The Car App lets admins manage cars and test drives, while users can view car details and book test drives easily.

2. Achievements:

Added login, car management, test drive booking, and Firebase integration.

3. Learning Outcome:

Learned Android development, Firebase, UI design, and debugging.

4. Limitations:

No online payment or car comparison yet.

5. Future Scope:

Add payments, AI suggestions, and Google Maps integration.
